End - To - End Network Management

Absolute Connectivity

Design

Cerento engineers design customized secure private wireless networks to meet your business and technical goals. We use a proven four step design process to deliver precise specifications. From needs analysis through design, delivery and review, we work directly with the customer to ensure a deliverable plan for every project.

Implement

Cerento certified engineers and installers will implement, configure, document and test each project deployment. Our installation team works jointly with our design engineers to execute detailed specifications in the field. Cerento engineers are on-site through system certification to ensure successful deployment.

Manage, Maintain and Support

Our end-to-end network management services provide ongoing monitoring, management and maintenance of client data networks from field device back to the corporate LAN. Cerento combines remote management with on-site technical support to guarantee uptime and deliver a highly efficient and reliable network.

Our three-tiered escalation procedure, along with a network operations center that is available 24-hours a day and staffed by experienced engineers, provides a reliable network management solution to maximize your networking capital investment.
